JLS Automation Brings Real World Innovation to Pack Expo 2010

[JLS Automation](#) of York, PA announces their participation in Pack Expo 2010 held in the McCormick Place in Chicago, Illinois from October 31 to November 3, 2010. JLS Automation will be exhibiting in the North Hall in Booth #3931. JLS will also exhibit with Alliance Partners [Ilapak](#) (Booth #2547) and [ADCO](#) (Booth #1213).

In response to their customers' increasing need for flexibility in their packaging operations, JLS will demonstrate the company's [Talon Series Packaging System](#) integrated with a Reiser Repak form, fill, and seal machine. During Pack Expo, the system will be packaging not one, but three different products with changeover in less than 2-3 minutes. According to Craig Souser, President of JLS, "None of our customers produce the same product day in, day out anymore. The continuous introduction of new products, product extensions, and variations in package configuration has become a major challenge for most CPGs. We help them meet this demand with our Design for Agility philosophy and the execution of this mindset in our **Talon** systems".

The **Talon** system eliminates manual product handling functions, including many elements of product inspection, and can be integrated with existing packaging lines, or as a complete "turn-key" packaging system. An integral part of the **Talon** system, the **Impulse** Multipick end of arm tool (EOAT) has been developed to achieve higher picking effectiveness, greater throughput speeds, and improved food contact suitability.
